

# Teacher Technology Survey

Friday, 20 June 2008

Last Updated Wednesday, 13 August 2008

The Lake Shore Technology Department would like to invite our teachers to participate in a survey to determine the future of technology in the classroom. This survey gathers information on how our teachers are using technology in their teaching. The results will be used to help us design a professional development program that best meets our needs. The first section of the survey collects information on teaching assignment and location. The remaining six sections cover the ways teachers use technology in the curriculum, in teaching, for communication, with media, for productivity, and for research. Please see your building principle for the code in order to take the survey. We ask that you take the survey by Wednesday June, 25th. To see the links please click "Read More."
